EDUCATION

IIITDM KANCHEEPURAM, Chennai — **November 2022 - Current**
Bachelor of Technology, Smart Manufacturing
Cumulative GPA : **8.91**

IIT MADRAS, Chennai — **September 2022 - Current**
Bachelor of Science, Data Science (Online)
Cumulative GPA : **8.05**

Maharishi International Residential School, Chennai — **2021-2022**
Class 12
Overall Percentage: **94**
JEE MAINS Percentile - **94.52**

Chanderbala Modi Academy, Gujarat — **2019-2022**
Class 10
Overall Percentage: **91.2**

ACHIEVEMENTS

L&T Techgium Engineering Hackathon FINALIST — 2024-2025

Problem Statement: Automatic Torque Allocation in EV Vehicles using Artificial Intelligence

- EV Vehicles use single speed transmission or Continuous Variable Transmission, leading to increase in vehicle weight and reduced efficiency.
- Our ideas is to mimic it, but using Neural Network.
- Using a **MPU6050 sensor**, we find the acceleration and orientation of the vehicle we change the Duty Cycle of the DC Motor and thus getting the required torque based on the terrain angle.
- Used Gazebo as Software Simulation Tool and used **RasberryPi** and **L298N motor drivers** with **Mabuchi RF-500 DC Motors** for Hardware Prototype.

WORK EXPERIENCE

ChampionX (Schlumberger), Analytics Intern — **Chennai** — May 2025 - Current

- Currently Working on Building and optimizing Dashboards using Alteryx and Power BI
- Working with Accounts Payable Finance Team to build a All in One Invoice Status Dashboard to integrate different Business logic in Invoice Classification.
- Built a statistical system to remove outliers in Tank Level Data reducing manual outlier classification by 90%

LTIMINDTREE, AI Intern — **Chennai** — July 2024 - August 2025

- Utilized Meta's Segment Anything Model to increase efficiency in Image Segmentation and Inpainting
- Created CI/CD Pipeline using Google Cloud Platform
- Completed Courses from Google and WatsonX regarding Prompting and Gen AI

THAPOVAN INFO. SYSTEMS, Intern — **Chennai** — May 2024 - June 2024

- Implemented Code Differentiator API leveraging React-Diff-View, empowering developers to identify and resolve code discrepancies; decreasing debugging time.
- implemented reranking and reordering of documents from the embeddings and returned top response from LLM as answer.
- Designed a Prompt template for Code Reviewer LLM.

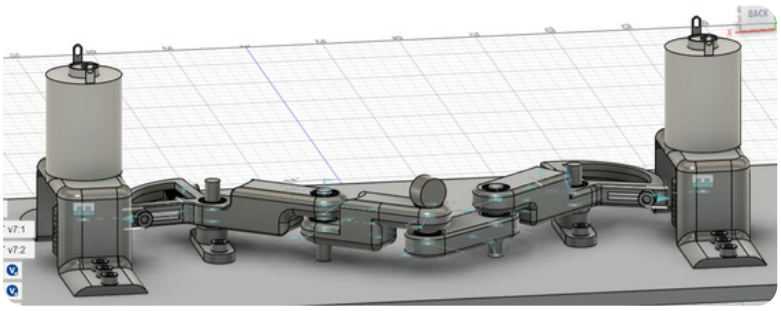
ROBOTICS CLUB IIITDM, Team Lead and Mechanical Engineer — **Chennai** — Sept 2023 - April 2025

- Directed the design and construction of advanced robotic combat systems used in national competitions, resulting in a 50% improvement in performance metrics, including speed and maneuverability, compared to previous years.
- Lead the team to various RoboWars Competitions throughout India

PROJECTS

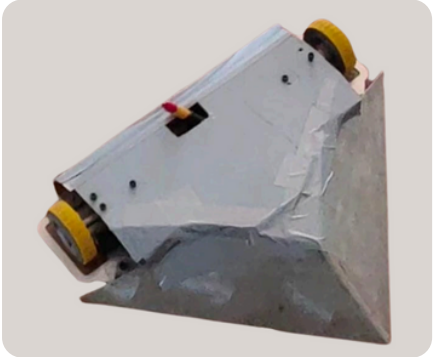
3D Printed Haptic System

This project involves the development of a 2D force-feedback haptic device that enables real-world movement to be mirrored in a virtual environment. The system utilizes Mabuchi motors and encoders to track motion accurately. Tension is Built up using String to drive the Capstan Drive.



BattleBots - 8Kg and 15 Kg

Assisted the Mechanical Team in Building and Designing Battle Worthy Bots for Robowars Competitions



CERTIFICATIONS

- Association Rules - LinkedIn Learning
- Power BI Desktop for Business Intelligence - Udemy
- SQL 50 Badge - Leetcode

SKILLS

- **Programming:** Python Programming, Java, MySQL
- **Libraries/ Frameworks:** Langchain, Flask, Scikit-learn, Beautiful Soup, Tensorflow, Selenium
- **Tools:** CoppeliaSIM, Linkage, Fusion 360, AutoCAD
